

FAITH IN NATURAL HEALTHCARE AND MEDICINE

**EXPANDING MECHANICAL AND
IMPERSONALIZED MEDICINE
TOWARDS INDIVIDUALIZED
AND HUMANIZED HALTHCARE**

**Prof. Dr. Ananthan Krishnan
Alternative Medicine Research Institute
Asia.**

From absolute authority to shared responsibility in healthcare and medicine

- **Before medicine became a very rich industry some one hundred years ago, the physician was the absolute authority.**
- **But in the late twentieth century a major shift in power began to take place, people wanted the power to take care of their own health.**
- **A revolt against mechanized health and medicine is brewing and new types of healing is being explored.**
- **The origins of this revolt can be traced to the new knowledge derived from the theory of relativity and quantum theory where energy and mind takes center stage. Man is viewed more than a physical entity, his cosmic inter-relatedness and inter – connection with everything in the universe has changed man's worldview of reality.**
- **The training of doctors has superseded the education of people on healthcare .**

From subjugation to creative self actualization

- **Ignorance subjugated people and submitted them to physicians**
- **The mindset that medical knowledge is only in the hands of a doctor has made the ordinary person virtually a slave to the medical profession.**
- **Right knowledge is pushing people to move beyond authoritarian medicine and old reductionist attitudes to look at man as a cosmic being with great self actualizing potential for healthful living using his own knowledge about health and life.**
- **Human health knowledge is being liberated from the clutches of a jealously guarded outmoded medical profession to the people of the world. This knowledge has created the spirit to fight against a system which has deliberately created a 'dependence system' where the people are forced to seek medical service. Freedom from this dominating authoritarian system will lead to creative self actualization, where truth prevails and medical independence will provide the healthy competition for quality enhancement in human health.**
- **The emergence of the "medicine of truth" as the desired system is changing the way healthcare is perceived and sought. People want to know how they are treated, they want to understand why the treatment is given and how it works.**
- **Doctors who behave like authoritative instructors, impersonal and mechanistic are abhorred and detested, disliked and condemned by the "new generation" people. They do not want to be tricked, threatened and deceived into a treatment modality for profiteering.**

People want knowledge and health not treatment

- **People want to learn how to be healthy**
- **People want to take control of their own health and be responsible for it.**
- **People want to use their full power to create super healthy life.**
- **They are looking for total healing, spiritual, emotional, mental and physical.**
- **They do not want to surrender his healthcare to others who manipulate his body chemistry or his organic function with a limited awareness of his total being and the energy that is vital to his life.**

Faith ! What is it ?

Essence of all things.

**The creative power of
cosmic intelligence that
drives the forces of live,
through created forms, to a
progressively higher
expression of that cosmic
intelligence.**

Faith

- the power of belief of the future -

- **The belief that things which we cannot prove physically exists.**
- **Best illustration is the belief in GOD as the Creative Power of existence.**
- **If we work on a problem persistently we will find a solution**
- **In human health, the healing process works better if the healer and healed use the power of faith.**

Faith, Healer & Products

- **These three aspects when combined well works better in the overall healing process.**
- **Proof:**
 - **Patients feels better after given faith and hope through interpersonal consultation.**
 - **From despair to hope**
 - **From demoralized state to a motivated**
 - **The products works better in patients who have faith in the healer and the product. The healing power latent in the human being is enhanced and empowered when faith is optimised.**

Faith as a sense of belief in a healing process

- **Conscious of being treated**
- **The effect of expectancy**
- **The power of hope and conviction**
- **The effect of positive change**
- **The belief that healing is part of life power to survive.**
- **Faith as a life force for positive change.**
- **Faith on the physician ability to heal**

The Healer must have faith in himself

- **Faith in the power of truth**
- **Faith in his power of healing.**
- **Faith in his knowledge of healing.**
- **Faith in the patient to believe in the healer and his skill.**
- **Faith in his products for healing.**

Healer - Patient - Faith is a process.

- **Faith can be lost if things do not work the way it was expected.**
- **Faith can be rebuilt on new grounds of belief.**
- **Faith draws on the cosmic energy**
- **Faith restores lost hope**

Healer must constantly use the power of faith

- **Learn how give faith to the patient**
- **Learn how to gauge how much faith the person has on the healer**
- **Keep the belief alive during the healing process.**
- **The healer for himself and the patient .**
- **Love is the counter part of faith.**

Healing Love is a positive sharing and caring feeling given by the healer to the healed .

- **Love is maintained when the healer sees himself in the healed.**

Thank You
